1. Screenshot of the application's home page displayed in your browser.
 - Index.ejs (home page)

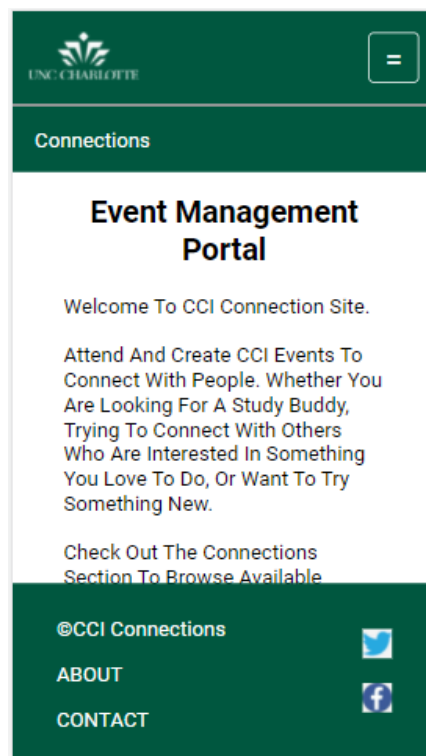

Event Management Portal

Welcome To CCI Connection Site.

Attend And Create CCI Events To Connect With People. Whether You Are Looking For A Study Buddy, Trying To Connect With Others Who Are Interested In Something You Love To Do, Or Want To Try Something New.

Check Out The Connections Section To Browse Available Connections!

2. Explanation of additional features, if any.

- ➔ There are no additional features added as of now. But added some extra validations.
 - MinLenth of details = 10
 - It will show the day in connection page where the story details are given.
For an instance, Monday, 2021-10-21.
 - Added initialize.js script, which will be run when app is restarted or started. It contains the database and collection creation and then adding 6 documents.

3. Explanation of status, stopping point, and issues if incomplete.

- ➔ Status-Completed. I have implemented all the mentioned functionalities. There were some challenging situations but with the use of materials and because of enthusiasm to learn, completed the project.

4. Discuss the easy and challenging parts of the assignment. How did you overcome all or some of the challenges?

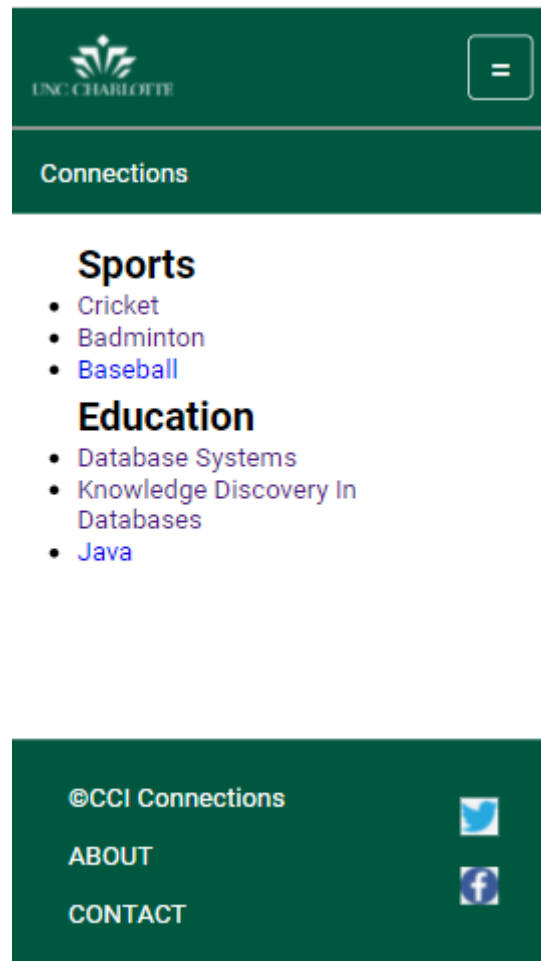

- ➔ MongoDB implementation was quite easy as already completed the exercises for the same.
- ➔ The challenging task was to create the initialize.js or (project3_createDB.txt), which I want to implement in a way it will be automatically executed when server restarts or server starts.
- ➔ I have gone through another module called child-process. With the use of exec method I ran the initialize.js script to initialize the database.
- ➔ For image url validation, I used Schema.path('imgUrl').validate(arrow function) to validate the url pattern.

Project2 Comments:

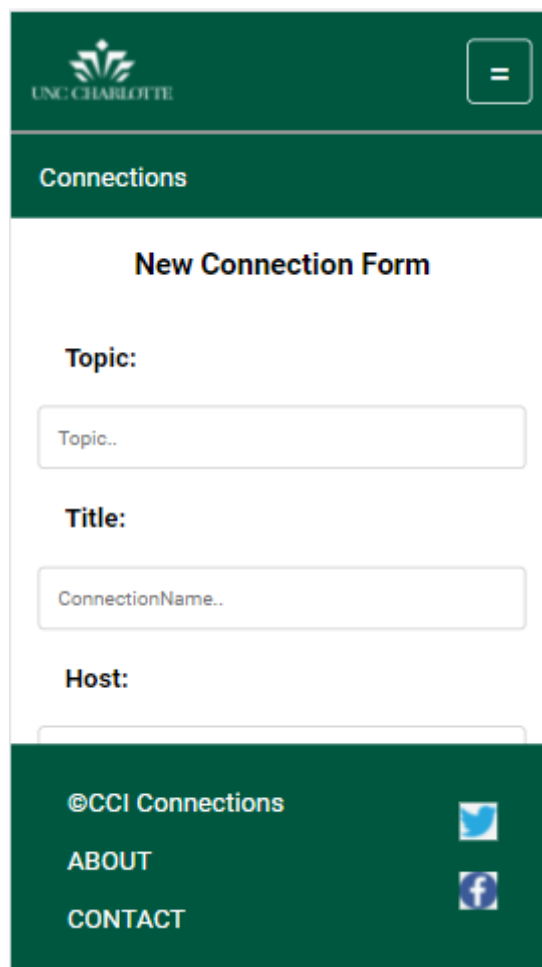

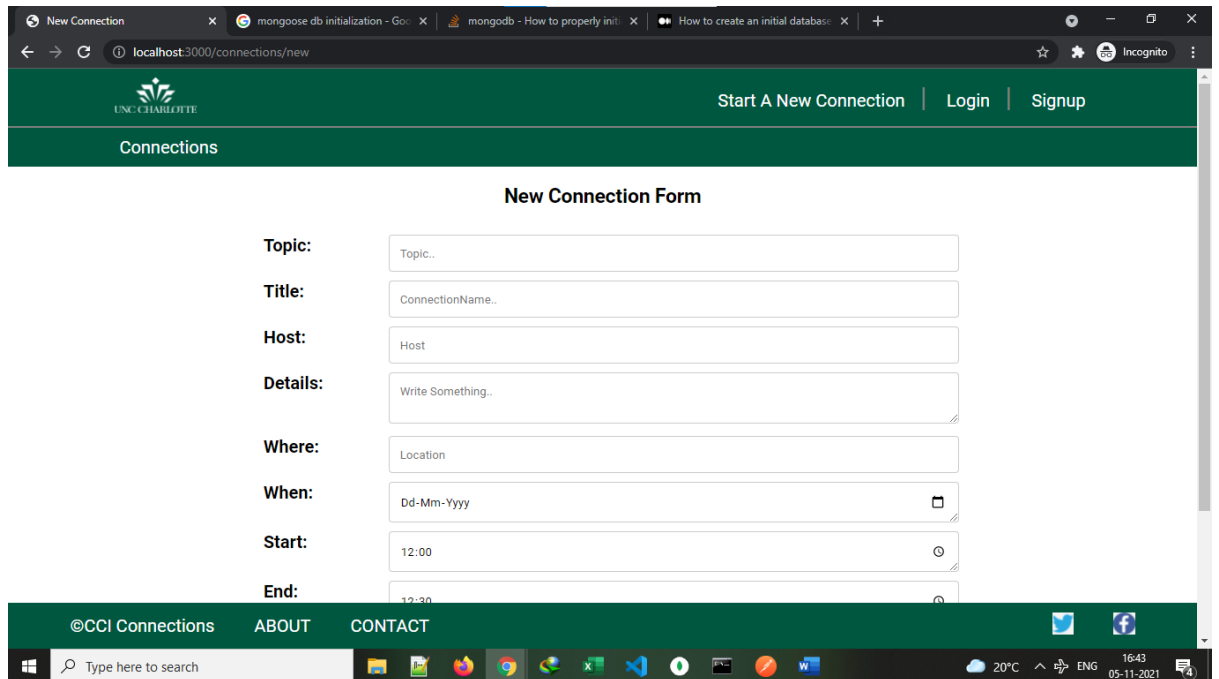

No comments from project 2 as it was successfully implemented according to the description given.

- Screenshots of all the pages with both view(laptop as well as mobile).
